1 VERSION CONTROL

Version	Author	Change date	Reason for Change
1 – 1.6	Neil Vendeiro		Initial Draft
1.7	Hannelie Venter	1 Dec 2009	Updated Sector Classification in line with the Industry Classification Benchmark (ICB) - 2009 Enhancements initiated by FTSE Group.
1.8	Eunice Nel	19 Jan 2010	Changed the Constituent Code's field length from 6 to 10 characters. The following Record Types are affected together with their Namibian counterparts: DFC 01 DFT 04 DFT 05/07 DCC 01 DCT 04 DCT 05/07 DPC 01 DPT 04 DPT 05/07 DYC 01 DYT 04 DYT 05/07 DDC 01 DDT 04
1.9	James Hough	15 Oct 2010 21 Jan 2011	Updated Index definitions for new indices in Section 4. Added the following new sections for new products and record types: Sections <u>1345</u> to <u>2123</u>. Added part 2 of Annexure A to describe country code translation in the new record types.
1.9 (revised)	James Hough	1 Apr 2011	Errors found in the layout positions of the following record types were all corrected (refer to <i>Errors in FTSE-JSE InfoMax User Manual Version 1.9</i> document): DNC01, DNV02, DNO11, D1C01, D1V02, D2C01, D2V02, D3C01, D3V02, D4C01, D4V02

Version	Author	Change date	Reason for Change
1.10	James Hough	1 Aug 2011	- The following record types had errors in the starting positions (previous field's length wasn't consistent with following field's start position). The definition in the file was inconsistent with what was being produced: D1T03, D2T03, D3T03, D4T03, DNT03 - The SEDOL fields in these record types had an invalid end position (the length was correct as was the start of the next field, so overall layout is not affected): D1T04, D2T04, D3T04, D4T04, DNT04 - The heading text was corrected on the following headings: ~~21.3.1.323-3.1.3~~ and ~~21.3.3.223-3.3.2~~ - The fields "Modified Date" and "Effective Date" had an inconsistent end position for DRF14 sequence 03 (the length was correct as was the start of the next field, so overall layout is not affected). - Added the following new sections for new product record types: Section ~~2224~~ to section ~~2628~~ - New Index descriptions in section 4.
1.11	James Hough	10 Aug 2011	- New TDIV Index description added to Section 4. - Added the following new sections for new product record types: Section ~~2729~~ to section ~~3640~~
1.12	James Hough	27 Sep 2011	- Change to the continuation of the tracker records for constituent amendments. For other stock-level amendment record types (like DFT04) when an instrument has multiple amendments then the details of the first amendment runs from continuation 01 to 04 and the details of the second amendment record for the same instrument runs from continuation 05 to 08, etcetera. This was not the case for the record types introduced in version 1.9, but to aid processing, the change has now been implemented in the following record types: DAT04, DAF14, DIT04, DIF14, DHT04, DHF14, DRT04, DRF14, DQT04, DQF14, DNT04, DNF14, D1T04, D1F14, D2T04, D2F14, D3T04, D3F14, D4T04, D4F14 - In order to process the changes identified in point 1 above, the "EMPTY PADDING" field on these record types has been replaced by a generated "EQUITY IDENTIFIER" field.

3 INTRODUCTION

The aim of the Dissemination system is to provide users with raw data on daily Index movements. All information offered for dissemination is extracted from the relevant JSE systems, and held in a central database. Each user can specify the type of records they require from the standard layouts available. The users can get their data via ISDN or Leased line connection.

The user must inform the Market Data Department in writing of the record types they would like to receive.

3.1 CONFIRMATION OF USER ID AND PASSWORD

1. A representative from the Business Support department will provide you with your Sign-on and Dataset name before 11am on the day you go live.
2. For security purposes, a representative from the RACF department will provide you with your Password.
3. An Account Officer, from the Market Data Department will contact you to confirm receipt of the Dataset, UserID and Password.

4 FTSE/JSE AFRICA INDEX SERIES

THE INDICES OF THE FTSE/JSE AFRICA INDEX SERIES

The FTSE/JSE Africa Index Series resulted from a joint venture between the JSE Limited (JSE) and the FTSE Russell Group (FTSE), a world leader in the creation and management of indices. The series brought with it a change in the philosophy and methodology for calculating indices and classifying sectors. The FTSE/JSE Africa Index Series replaced the JSE Actuaries indices on 24 June 2002.

The FTSE/JSE Africa Index Series complies with the recommendations made by the International Organization of Securities Commissions (IOSCO), as laid out in the Principles for Financial Benchmarks published in July 2013 (the IOSCO Principles). More information is available at www.ftserussell.com

FTSE/JSE Africa Headline Indices

All eligible listed companies are included in at least one of the FTSE/JSE Africa Headline Indices. The eligible companies are ranked by full market capitalisation (before free float weightings are applied). The top 99% of all companies are included in the **FTSE/JSE All Share Index** with the remaining 1% forming the **FTSE/JSE Fledgling Index**. The FTSE/JSE All Share Index is further divided into the **FTSE/JSE Large Cap Index**, **FTSE/JSE Mid Cap Index** and **FTSE/JSE Small Cap Index**. For a full list of Indices and their details, please click on this link <https://www.jse.co.za/services/indices/ftsejse-africa-index-series>

5 SECTOR CLASSIFICATION

Securities are classified according to the **ICB Classification** System,

Please refer to the link below for more information regarding the new ICB structure that was introduced on 1 July 2019:

7 EXPLANATION OF THE INDEX TREATMENT FOR SPECIFIC CORPORATE ACTIONS (DUMMY LINES IN DATA RECORDS)

FTSE Russell Rules regarding the use of Dummy Lines in Indices:

- 7.1. Dummy lines are non-tradable instruments which have been temporarily created by FTSE/JSE in order to reflect a corporate event.
- 7.2. The use of dummy lines is normally determined on an ad hoc basis and typically results from complexities surrounding a corporate event.
- 7.3. Where the use of dummy lines is necessary FTSE/JSE provides advance notification either via an Informative Notice published on the FTSE/JSE website. Dummy lines will also be visible within the standard corporate action deliverables when they are being utilized.
- 7.4. Dummy lines are generally used in order to ensure the index reflects the investor experience or in order to facilitate index replication by index funds.

Under this rule the JSE would add in a dummy line on ex-date to represent the distribution until after settlement date, and then subsequently delete the dummy line and increase the free float in the distributed stock on the same date.

If the distributed instrument is not eligible for index inclusion, the index divisor will change with the deletion of the dummy line.

On the ex-date of the distribution:

- The stock which is distributing its shareholding price will be adjusted.
- This is offset by the addition of a dummy line which corresponds with the value of the distribution – the terms are applied to the share figure and the price is updated nightly to match the close price of the stock which is being distributed.
- Market cap neutral for all holders.

T + 2 from the settlement occurring:

- The dummy line is deleted.
- The stock which has been distributed has its free float adjusted to reflect the terms distributed into the index.
- Market cap neutral only for the shared indexes.

An ISIN will be generated to contain the word 'DUMMY' in order to distinguish it from other securities.

9.2 CONSTITUENTS DATA FILES

9.2.1 Leading Record Layout

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every CAPPED Index in this family. At the time of production of this manual only two Capped indices are being calculated i.e. the Capped All Share Index and the Capped Top40 Index.

The sequences will work as follows:

Sequences 01 - 04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

10.2 CONSTITUENTS DATA FILES

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every SWIX Index in this family. At the time of production of this manual only two Shareholder Weighted indices are being calculated i.e. the Shareholder Weighted All Share Index and the Shareholder Weighted Top40 Index.

The sequences will work as follows:

Sequences 01–04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

11.2 CONSTITUENTS DATA FILES

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every Shareholder Weighted Sector Index in this family.

The sequences will work as follows:

Sequences 01–04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

FIELD DESCRIPTIONS:

Dividend Yield Percentage

Percentage dividend yield per stock

$$= \left(\frac{\text{Annual div}}{\text{price}} \times 100 \right)$$

Three year historic sales growth

3 Year Historic Sales Growth reflects the average of the company's three most recent consecutive absolute net sales or revenue annual growth values. The most recently reported sales value should be less than 18 months old (in developed markets). Sales values are for the 12 months to the company's fiscal year end and are generally as reported by the company. However, sales are generally adjusted to exclude excise taxes, sales from non-operating activities and discontinued operations in addition to sales generated by associated companies. If the company has changed its year end and a 12 month figure is not reported, the reported value is annualised. A sales value is also calculated for banks, insurance & financial companies and includes interest, investment & premium income in addition to commission & fees as appropriate.

Three year historic EPS growth

3 Year Historic EPS Growth is the average of the company's three most recent consecutive absolute EPS annual growth values. The most recent EPS value should be less than 18 months old (in developed markets). Annual earnings per share (EPS) is for the 12 months to fiscal year end. EPS is calculated as net income after taxes, minority interest and preferred dividends, but before amortization of intangibles and after-tax extraordinary items, divided by adjusted shares.

Two year forward sales estimates

This field will not be populated and will be filled with zeros.

estimates generally reflect sales derived from the company's core-operating activities. Generally transportation & non-operating costs are excluded from gross revenues for industrial corporations. Bank revenues include interest and non-interest income. Insurance revenues are comprised of net technical income and net financial income.

Two year forward EPS estimates

EPS estimates are generally based on net income from continuing operations divided by weighted average shares outstanding for the year.

Growth Rate

Return on Equity is Earnings per Share (EPS) for the most recent fiscal year divided by the previous year's book value per share. Payout ratio is Dividend per Share (DPS) divided by EPS. Values are again for the 12 months to the most recent fiscal year end. (More detailed EPS, Book Value and dividend per share definitions can be found under the "3 Year historic EPS growth", "Book to Price", "Dividend Yield" headings respectively)

FIELD DESCRIPTIONS:

BOOK TO PRICE

Book to Price is a company's common/ordinary equity capital at the most recent fiscal year end divided by the company's market capitalisation at the review date. Common/ordinary equity is generally as reported, but is adjusted to exclude minority interest, preferred stock and selected items as appropriate.

SALES TO PRICE

Sales to Price is a company's most recent annual sales value divided by the company's market capitalisation at the review date. (A more detailed definition of sales is provided under the "3 Year historic sales growth" heading)

CASH FLOW TO PRICE

Cash Flow to Price is generally a company's most recent Cash Flow for the year divided by the market capitalisation of the company at the review date. If Cash Flow is not reported it is estimated based on net income plus depreciation and other non-cash items.

EQUITY IDENTIFIER

This field contains a generated identifier used to differentiate between instruments on multiple lines; it is partly based on Constituent Code and is not maintained by JSE. It is intended only for record processing and is not supported outside of this purpose. International equities should still be uniquely identified by FTSE Constituent Code.

RECORD TYPE

The code indicating the type of information contained in the record disseminated - e.g.: D2F.

SUB TYPE

The Sub Type related to a particular record type - e.g. Sub Type 14.

CONTINUATION SEQUENCE

The sequence number used to join together certain record types, where more than one record exists per record type.

RUN DATE

DISSEMINATION DATE - The date of the dissemination run, in the format CCYYMMDD.

ISIN

The ISIN (International Securities Identification Number) uniquely identifies all Active and Suspended securities internationally.

30.228.2 CONSTITUENTS DATA FILES

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every Minimum Variance Index in this family. At the time of production of this manual only one Minimum Variance index is being calculated i.e. the Minimum Variance Top 40 Index.

The sequences will work as follows:

Sequences 01 - 04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

31.229.2 CONSTITUENTS DATA FILES

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every Minimum Variance Index in this family. At the time of production of this manual only one Minimum Variance index is being calculated i.e. the Minimum Variance All Share Index.

The sequences will work as follows:

Sequences 01 - 04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

32.230.2 CONSTITUENTS DATA FILES

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every Responsible Investment Index in this family. At the time of production of this manual only one Responsible Investment index is being calculated i.e. the Responsible Investment Index.

The sequences will work as follows:

Sequences 01 - 04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

33.231.2 CONSTITUENTS DATA FILES

This file contains the index constituents as at the end of the current day.

Please note that the sequences will be created in multiples of 4 for every Responsible Investment Index in this family. At the time of production of this manual only one Responsible Investment index is being calculated i.e. the Responsible Investment Index.

The sequences will work as follows:

Sequences 01 - 04, will carry data for all indices in this family, and the constituents within each index can be identified by looking at the fields within the leading record. The index code in the leading record needs to be used in conjunction with the Record Type's sequence number in order to distinguish which index a constituent record is referring.

N.B These record types will on an ad-hoc basis include dummy line instruments due to complex Corporate Actions, please refer to section 7 of this document for the full explanation of Dummy Lines.

4036 FTSE INTERNATIONAL CURRENCY EXCHANGE RATES

40.136.1 CURRENCY EXCHANGE RATES DATA FILE

This file contains the international currency exchange rates used by FTSE for calculation of market capitalisation, Index value and TRI in multiple currencies. This is used by FTSE to generate the international valuations files (DNV, D1V, D2V, D3V and D4V) and is intended to make public the exchange rate that they used in these calculations. This is not intended to be an authoritative indication of international exchange rates as traded on any particular foreign exchange market.

CURRENCY ISO CODE

The ISO currency code of the currency to which the given exchange rate applies. The three letter currency codes are in accordance with the [ISO 4217 standard](#) (click for details). The exception is that some codes are added to represent 1/100 denominations (cents, pence and so on) as a distinct code that isn't recognised by ISO. These are:

- GBX 1/100 GBP (British Pennies)
- ILX 1/100 ILS (Israeli Agorot)
- USC 1/100 USD (United States Cents)
- PNC a non-existent currency (equals 1 GBX)

EXCHANGE RATE

The factor to multiply 1 USD by in order to have an equivalent amount in the named currency in the preceding field.

4238 FTSE/JSE TOP 40 NET RISK TARGET TOTAL RETURN INDEX

The FTSE/JSE Top 40 Risk Target Return Index Series is based upon a rules-based framework that tracks the return of an investment strategy which aims to provide an investor with risk targeted exposures to the FTSE/JSE Top 40 Index. The Risk Target Indices make use of the empirical properties of the risk statistic and aim to provide an equity investor access to three different levels of risk exposure for the FTSE/JSE Top 40 Index: 10%, 15% and 20% respectively.

43.139.1 CALCULATION OF THE TOTAL RETURN INDICES (TRI'S)

The Total Return Indices (TRI's) measure total return on the underlying indices, combining both capital performance and reinvested income. The TRI's are calculated using declared dividends except where specified that the TRI is calculated on a net basis.

Although in reality there is a timing delay between the xd date and the receipt of dividends (payment date), it is considered preferable to assume all income is reinvested on the xd date rather than incur the complications of allowing a time lag before (i) reinvestment of the net dividends, and (ii) different and uncertain time lag before reinvestment of any tax reclaimed.

43.239.2 INTERNATIONAL PRODUCT COUNTRY CODE TRANSLATION
