Date: 06 July 2026

Name and Surname: Helina Andhee
Designation: Chief Officer - Capital Markets

JSE TRADING AND INFORMATION SYSTEM HARDWARE REFRESH NOTIFICATION

As part of JSE's ongoing commitment to maintain a resilient and secure market infrastructure, the JSE will be undertaking a hardware refresh of the Trading and Information Systems across the Equity, Equity Derivatives and Currency Derivatives Markets.

The purpose of this initiative is to replace existing infrastructure that is approaching its intended life cycle.

The scope of the hardware refresh will involve the migration of the Trading and Information system platforms onto new production hardware infrastructure. The project will focus on infrastructure renewal while maintaining existing application functionality and operational behaviour.

To minimise implementation risk and maximise market readiness, the JSE will execute the hardware refresh using a phased deployment approach. The refreshed trading and information system infrastructure will first be deployed into the Customer Test Service (CTS) environments during August 2026. This will provide all clients with an opportunity to validate connectivity and perform testing activities against the refreshed infrastructure before Production deployment.

Following successful completion of CTS deployment, testing and market readiness activities, the JSE intends migrating the Production environment during the **fourth quarter of 2026**. Preparation dress rehearsals are provisionally planned for Q3 2026.

Detailed deployment dates and testing schedules will be communicated in subsequent Service Hotlines.
