Information Delivery Portal – Enhancement of security protocol for End of Day dissemination file access

As part of the JSE's ongoing improvement of security of the JSE's environment to protect the privacy of information stored on our systems, we are looking at an enhanced method of encrypted communication for clients who subscribe programmatically to the Information Delivery Portal (IDP).

This **enhancement applies** to clients who currently connect to IDP either via a leased line or via the internet **using Secure File Transfer Protocol (FTPS)**. There is **no impact** to the security of the **FTP protocol**:

- idp.jse.co.za
- bondftp.jse.co.za

This security enhancement will **go live on Monday, 23 June 2014**. To assist clients in preparing for the enhancement, the JSE will be facilitating a **connectivity test** for all **impacted clients on Saturday, 21 June 2014 between 08h00 and 09h00**. Clients wishing to participate in this test **must notify Customer Support** on CustomerSupport@jse.co.za or +27 11 520 7777 **by no later than Friday, 6 June 2014**. Please provide contacts details of the team involved in the test when making your booking.

The updated IDP Connectivity document is now available and includes tracked changes to assist clients in identifying the changes being introduced. For convenience, following is the link to the updated document:-

https://www.jse.co.za/content/JSEDocumentItems/IDP_Connectivity_Document%20v2.5.pdf

Service:

Information Delivery Portal (IDP)

Environment(s):

Production
