SENS REPLACEMENT – TEST DATA AVAILABILITY FOR OPTIONAL REGRESSION TESTING

Non-live market data product subscribers have previously been advised of the project to replace and modernise the **Stock Exchange News Service (SENS)** solution. As part of the related readiness activities, the JSE is making a SENS non-live data product test data file available to assist subscribers who may wish to perform regression testing.

There are no changes to the existing non-live data file layout. The attached test data file is being provided as a courtesy to enable subscribers to confirm that their internal systems and downstream processes continue to operate as expected ahead of the planned SENS replacement go-live.

The regression testing is optional, however, subscribers who elect not to perform regression testing do so at their own risk and remain responsible for ensuring that their systems and processes can continue to consume and process the SENS non-live data product files after the implementation.

The test data file is located on the IDP FTP server and can be accessed via the following link. [\\vyppscmapp01\June 2026\Monday](#). The test data is made up of two zipped data files that contain the text and PDF format outputs for 11 July 2026.

Subscribers who choose to perform regression testing are requested to complete their testing and report any issues to SENSProject@jse.co.za by **7 August 2026**. Any questions relating to the test data files may also be directed to this mailbox.
