Name and Surname: Martin Koch
Designation: Head - Trading Operations

JSE TRADING AND INFORMATION SYSTEM UPGRADE - RELEASE 7.8 (REMINDER)

This Service Hotline follows our previous communication ([070/2026](#) and [100/2026](#)) regarding **Release 7.8 (MIT Upgrade 2026)**, and serves as a reminder of the upcoming deployment and go-live date, as well as important information regarding the TIDM field identifier.

Clients are reminded that Release 7.8 will be deployed to the Production Environment on Saturday, 15 August 2026, and will be effective from Monday, 17 August 2026. The release affects the Equity Market (**EQM**), Equity Derivatives Market (**EDM**) and Currency Derivatives Market (**FXM**). The system will be available for the remainder of the day following deployment for any testing, which is highly encouraged.

The TIDM (Tradable Instrument Display Mnemonic) field identifier will no longer be provided as part of the JSE's reference data going forward.

- As a result, TIDM values will no longer be populated in the relevant outputs.
- This update does not change the existing message structures on MITCH, FIX/FAST, or SENS. The field position remains unchanged; however, no values will be populated.
- All market data specifications that currently contain the TIDM field will be updated to reflect "Reserve" in place of the previous description.
- The InstrumentsEquity.csv file in Volume 09- JSE Reference Data Management v205 will be updated, replacing the TIDM field with Reserve.
- This update also impacts Volume 05, Volume 06 and Volume 08.

Specifications and API documentation outlining the enhancements forming part of the MIT Upgrade 2026 are available in the **Next Functional Release** section of the JSE Client Portal: <https://clientportal.jse.co.za/technical-library/trading-and-market-data-documentation>
