URGENT: INTEGRATED TRADING AND CLEARING (ITAC) PROJECT 1A: CHANGE TO EXTENDED STATISTICS MESSAGE ON THE MITCH MARKET DATA GATEWAY

Clients are advised that the JSE has identified a defect with the Extended Statistics Message on the MITCH Market Data Gateway.

In order for the JSE to proceed with the implementation of the new software, a change needed to be made to the "Turnover" field within the message which reduces the implied decimals from 8 to 4, but the overall length of the field remains unchanged.

The change has been implemented and deployed to the Customer Test Service (CTS) environment and will be included in the configuration for the Dress rehearsal tomorrow Saturday, 24 September 2016.

The CTS trading schedule will be extended until 22h00 for today, to allow clients to conduct testing.

Please refer any queries relating to this to ITACTradingAPI@jse.co.za.
