**SERVICE HOTLINE**

Integrated Trading and Clearing Project (**ITaC): Draft Trading API Specifications**

This notice serves to inform market participants that the **DRAFT** Trading API Specifications are now available on the JSE website at

*https://www.jse.co.za/services/post-trade-services/itac*

The specifications are published in a **DRAFT** state only in the interest of providing market participants with an early view of the proposed changes. The versions are clearly labeled as 3.XX and should be read to gather an understanding of the proposed changes to the existing JSE Equity Market Trading System in anticipation of the Derivative Markets migration from the existing platform to the new integrated trading solution based on the Millennium Information Technologies Platform.

Market participants are reminded that the Equity Market API will be upgraded as part of the ITaC project with no Derivative Markets capabilities available as part of the deployment earmarked for Q3/Q4 2016. As such, the specifications include all API changes in anticipation of these future releases.

Final versions of the specifications will be published during Q1 2016.

Please refer all API Specification related queries to ITACTradingAPI@jse.co.za. Queries should be submitted via email for the time being and will be addressed in due course or during technical working sessions.
