UPDATE ON CHANGES TO JSE POP SERVICE IN 2017

The JSE wishes to inform our esteemed clients that the JSE will be migrating to a new International PoP solution with a new service provider between 1 March 2017 and 30 June 2017. The new solution will bring several benefits to JSE clients including:

- expanding the JSE International PoP reach to major liquidity data centres (Capital Markets data centres)
- enabling clients to contract for POP connectivity for shorter periods (one month minimum) thus catering for short period usage or trial requirements
- reducing the lead time for implementing new connectivity to a few days instead of weeks
- anticipated lower JSE costs for clients

For JSE clients currently directly connected to the current JSE PoP in the LD4 data centre in London, migration of the cross-connect cables from the current JSE switch infrastructure to new switch infrastructure will be required. Cross connect cable migration will only be conducted on the cross-connect cable-end that terminates in the JSE switch infrastructure. **At this stage, we anticipate that no action is required in the client rack and no logical changes to the configurations are required by clients.**

The JSE will provide more information in early next year as well as proposed dates for cross-connect migration weekends to clients for consideration and agreement.

We thank you for your cooperation. If you have any questions, please send them to mdclients@jse.co.za or alternatively raise them with your account manager.

Market / Service:

JSE POP Data Service

Environment(s):

Production
