#### JSE CONTINGENCY IN THE EVENT OF PROLONGED ELECTRICITY OUTAGES

In light of the recent electricity outages by Eskom, the JSE would like to inform clients of the current electricity alternatives that exist to continue providing JSE services from the Primary Production Site or the Remote Disaster Recovery Site.

In the event of load shedding, the JSE Uninterruptable Power Supply (UPS) and generators ensure that there is no loss of power to the production data centre, until Eskom power is restored. The diesel storage capacity at the production data centre premises can sustain a generator run time of approximately 7 days, at the current load. The JSE production data centre is designed and built to Tier III specifications, and provides concurrently maintainable redundant A and B paths for both power and cooling to the data centre. The threshold levels of the bulk diesel tanks are proactively monitored to ensure adequate supply and refuelling is managed with a contracted fuel supplier.

The JSE Remote Disaster Recovery Site generators can run for twelve hours on full load and an agreement is in place with a contracted fuel supplier to refuel when the diesel tanks reach 50% capacity.
