Interest Rates and Derivatives Markets Network Changes

The JSE is enforcing further robust network infrastructure policies on the Interest Rates and Derivatives markets which will require connectivity testing on 17 May 2014.

Access lists will now be created on the JSE Firewall that will restrict unauthorized access into the Interest Rates and Derivatives Markets. Clients' source IP addresses will be added to the newly created access lists. It is therefore imperative that connectivity tests are conducted on 17 May 2014 to ensure that clients do not experience any connectivity issues on Monday, 19 May 2014.

API and frontend logons will not be necessary as telnet tests will suffice to prove connectivity. The IP addresses and ports are as follows:

Market	IP Address	Port
Equity Derivatives	196.216.152.131	2003
Commodity Derivatives	196.216.152.131	2210
Interest Rates and Currency Derivatives	196.216.152.20	2269

The JSE apologizes for the late notification; however, 17 May 2014 is the only available weekend to implement these changes.

Connectivity testing is scheduled as follows:-

Saturday, 17 May 2014	08h00 - 10h00
-----------------------	---------------

Markets /Service:

- Equity Derivatives
- Commodity Derivatives
- Interest Rates and Currency Derivatives

Environment(s):

Production
