Special and Cash Dividend

JSE Ltd (JSE) has declared a special dividend of **100** cents per share and cash dividend of **961** cents per share. With regards to this corporate action, the following adjustments will be made to JSE positions on 15 April 2026 (**Ex-date**). The adjustments will be made to positions held at close of business on 14 April 2026 (**LDT**).

IMPORTANT NOTE for position holders:

Certain types of corporate actions require futures and options positions to be adjusted. This is done by applying the relevant position factor (determined as per published methodologies). The application of the position factor often results in decimal values, as a result rounding is a key part of the corporate action processing.

Therefore, current positions multiplied with the factor are rounded up or down to the nearest whole contract which determines the adjusted position. Smaller positions (depending on the factor) may as a result not receive additional contracts.

Please refer to the published guidance note for details:

<https://www.jse.co.za/content/Guidance%20Notes/ITaC%20Guidance%20Note%20on%20Corporate%20Actions.pdf>

Adjusted positions will be created at an initial value of zero.

Please note:

Position adjustments will be made to all contracts where **JSE** is the underlying share. These contracts include:

1. POSITION FACTOR

The positions will be adjusted by the following factor:

Calculation of position factor:

Spot price / adjusted price

Where:

Spot price = the official closing price of the underlying share on **14 April 2026 (LDT)** – 9.61 (**Cash Dividend**)

Adjusted price = Spot price – **1.00 (Special Dividend)**.

Example: If the official closing price of the underlying shares on 14 April 2026 (**LDT**) is **160,56**, the following would apply:

$$\begin{aligned} \text{Spot price} &= 160.56 - 9.61 \\ &= \mathbf{150.95} \end{aligned}$$

$$\begin{aligned} \text{Adjusted price} &= 150.95 - 1.00 \\ &= \mathbf{149.95} \end{aligned}$$

$$\begin{aligned} \text{Position factor} &= 150.95/149.95 \\ &= \mathbf{1.006669} \end{aligned}$$

I.e. Current positions*factor (rounded to nearest whole contract) = the number of total contracts. Adjusted contracts will be created at an initial value of zero.

2. OPTION CONTRACTS

- a. The positions on options will be adjusted by the position factor.
- b. The option strikes will be adjusted by the options factor:

Calculation of options factor (based on the example above):

Adjusted price / spot price.

$$\begin{aligned} \text{Options factor} &= 149.95/ 150.95 \\ &= \mathbf{0.993375} \end{aligned}$$

Example: if the old strike is 150.55 the following would apply: -

$$\begin{aligned} \text{New strike} &= \text{Old strike} * \text{options factor} \\ &= 160.55 * 0.993375 \\ &= \mathbf{159.49} \end{aligned}$$

Existing positions will be closed out at a 0 value and new positions opened at the new strike with a 0 value.

3. CFD CONTRACTS

Current positions*Factor (rounded to nearest whole contract) = the number of total contracts. Adjusted contracts will be created at an initial value of zero.

TREATMENT FOR ALLOCATION ON ADDITIONAL CONTRACTS
