## **1. FUTURES CONTRACTS**

The futures positions will be adjusted by the following factor:

Calculation of futures factor:

**Spot price / adjusted price**

Where:

**Spot price** = the official closing price of the underlying share on 2 May 2023 (**LDT**)

**Adjusted price** = Spot price – **4.04635 (Capital Reduction)**

Example: If the official closing price of the underlying shares on 2 May 2023 (**LDT**) is 110.60, the following would apply:

Spot price = 110.60

Adjusted price = 110.60 – **4.04635**  
= **106.55**

Futures factor = 110.60 / 106.55  
= **1.03801**

**I.e.** Current positions\*factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.

## 2. OPTION CONTRACTS

- a. The options position will be increased by the same factor as the futures above.
- b. The option strikes will be adjusted by the following factor:

Calculation of options factor (based on the example above):

**Adjusted price / spot price.**

Options factor = 106.55 / 110.60  
= **0.963382**

Example: if the old strike is 110.50 the following would apply: -

**New strike** = Old strike \* options factor  
= 110.50 \* 0.963382  
= **106.45**

Existing positions will be closed out at a 0 value and new positions opened at the new strike with a 0 value.

## 3. CFD CONTRACTS

Current positions\*Factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.
