1. FUTURES CONTRACTS

The futures position will be increased by the following factor:

Calculation of futures factor:

Spot price / adjusted price

Where:

Spot price = the official closing price of the underlying share on **30 August 2022 (LDT)**.

Adjusted price = Spot price – **4.03351 (Capital Reduction)**.

Example: If the official closing price of the underlying shares on 30 August 2022 (**LDT**) is 97.57, the following would apply:

Spot price = 97.57

Adjusted price = 97.57 – 4.03351
= **93.54**

Futures factor = 97.57 / 93.54
= **1.043083**

I.e. Current positions * factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.

2. OPTION CONTRACTS

- a. The options position will be increased by the same factor as the futures above.
- b. The option strikes will be adjusted by the following factor:

Calculation of options factor (based on the example above):

Adjusted price / spot price

Options factor = 93.54 / 97.57
= **0.958696**

E.g. if the old strike is 95.00 the following would apply: -

New strike = Old strike * options factor
=95.00 * 0.958696
= **91.07**

Existing positions will be closed out at a 0 value and new positions opened at the new strike with a 0 value.

3. CFD CONTRACTS

Current positions*Factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.
