**1. FUTURES CONTRACTS**

The futures position will be increased by the following factor:

Calculation of futures factor:

**Spot price / adjusted price**

Where:

**Spot price** = the official closing price of the underlying share on **26 April 2021 (LDT) – 12.43 (Cash Dividend)**

**Adjusted price** = Spot price – **5.43 (Special Dividend)**.

Example: If the official closing price of the underlying shares on 26 April 2021 (**LDT**) is 180.30, the following would apply:

Spot price = 180.30 – 12.43 = **167.87**

Adjusted price = 167.87 – 5.43  
= **162.44**

Futures factor = 167.87/ 162.44  
= **1.03342773**

**I.e.** Current positions\*factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.

## 2. OPTION CONTRACTS

- a. The options position will be increased by the same factor as the futures above.
- b. The option strikes will be adjusted by the following factor:

Calculation of options factor (based on the example above):

**Adjusted price / spot price**

Options factor = 162.44 / 167.87  
= **0.96765354**

E.g. if the old strike is 166.87 the following would apply: -

**New strike** = Old strike \* options factor  
= 166.87 \* 0.6765354  
= **161.47**

Existing positions will be closed out at a 0 value and new positions opened at the new strike with a 0 value.

### 3. CFD CONTRACTS

Current positions\*Factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.
