## 1. FUTURES CONTRACTS

The futures position will be increased by the following factor:

Calculation of futures factor:

**Spot price / adjusted price**

Where:

**Spot price** = the official closing price of the underlying share on **10 August 2021 (LDT) – 70 (Cash Dividend)**

**Adjusted price** = Spot price – **105 (Special Dividend)**.

Example: If the official closing price of the underlying shares on 10 August 2021 (**LDT**) is 1.893, the following would apply:

Spot price =  $1893 - 70 = \mathbf{1823}$

Adjusted price =  $1823 - 105$   
= **1718**

Futures factor =  $1823 / 1718$   
= **1.061118**

**I.e.** Current positions\*factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.

## 2. OPTION CONTRACTS

a. The options position will be increased by the same factor as the futures above.

b. The option strikes will be adjusted by the following factor:

Calculation of options factor (based on the example above):

**Adjusted price / spot price**

Options factor =  $1718 / 1823$   
= **0.942403**

E.g. if the old strike is 1850.00 the following would apply: -

**New strike** = Old strike \* options factor  
=  $1850 * 0.942403$   
= **1743**

Existing positions will be closed out at a 0 value and new positions opened at the new strike with a 0 value.

### 3. CFD CONTRACTS

Current positions\*Factor (rounded to nearest whole contract) = the number of total contracts. Additional contracts will be created at an initial value of zero.
