Investec authority to use the Index: Yes

Description and Compilation:

CDS Indices are over-the-counter (OTC) products and can be traded with licensed participants providing liquidity. A CDS index is an index whose underlying reference obligations are credit default swap instruments. The names in the index are selected based on their liquidity, respective business sectors, and geographical location, and depend on the rules governing the index. Tradable CDS indices allow investors to take a view on certain portions of the credit markets. Standardized CDS indices are created and administered by S&P Dow Jones Indices and include the CDX and iTraxx indices. CDS indices are among the most liquid instruments in the credit markets, enabling investors to efficiently access key market segments at low cost.

A list of licensed participants providing liquidity for the European and Asian indices is available on:

<http://www.ihsmarkit.com/Documentation/Product/ITraxx>

Establishment:

In 2004, TRAC-X and iBoxx CDS indices merged to form the CDX indices in North America and the iTraxx indices in Europe and Asia. After being the administrator for CDX and calculation agent for iTraxx, Markit acquired both families of indices in November 2007, and owned the iTraxx and CDX indices, along with iTraxx SovX, and MCDX Indices for derivatives, and the iBoxx indices for cash bonds. Markit subsequently merged with IHS to become IHS Markit in July 2016, which in turn merged with S&P Global in March 2022. The iTraxx and CDX indices are now part of S&P Global's index offerings under S&P Dow Jones Indices.

Review frequency:

Indices roll every six months in March and September. At each roll, a new series of the CDS index is created with updated constituents. Though previous series continue trading, liquidity tends to concentrate in the most recent on-the-run series. Further, liquidity is greatest in the 5-year tenor contract. For example, iTraxx Crossover Series 41 will begin trading on March 20, 2023. Then, most investors looking to maintain their credit exposure with the CDS indices will roll their position into the new series. The fixed tenors of the CDS indices enable investors to extend the duration of their position at each index roll, thereby maintaining consistent duration.

Modifications and Discontinuation:

Following a Credit Event in a constituent of the CDS index, a new version of the index is published which assigns a zero percent weight on the relevant entity. The notional amount on the index trade is reduced by the weight of the name in the index
