NUTRON FRONTEND VERSION 1.0.0.26364 PATCH

Dear Stakeholder

The JSE has unfortunately identified a problem in the latest NUTRON front end version 1.0.0.26364 which was released a few weeks ago as part of the February 2011 application release.

The problem identified can lead to impaired performance of the NUTRON front end on version 1.0.0.26364. We therefore urge all users who have already upgraded to version 1.0.0.26364 to patch their front end with the file available in the following download location:

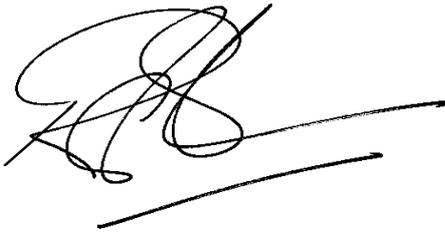

http://www.jse.co.za/DownloadFiles.aspx?RequestedNode=DownloadableDocuments/Safex/NUTRON_Feb2011Patch

The file sxhandler.dll must be saved into the running directory of your NUTRON front end version 1.0.0.26364. Your front end needs to be closed while this is done.

Users only upgrading today do not need to perform this patch as the upgrade folder already contains this patch. Users making use of Click Once have to apply this patch irrespective of when they upgrade. We apologise for any inconvenience this may cause.
